Biennial bearing (or alternate) bearing is a term used in pomology to refer to trees that have an irregular crop load from year to year. In the "on" year too much fruit is set, leading to small fruit size. Excess weight in the main branches can be too much for their mechanical resistance, causing them to break.

[Biennial bearing - Wikipedia](#)

An alternate bearing plant or branch or orchard is the one that does not bear a regular crop year after year, rather heavy

yields are followed by extremely light yield and vice versa. Alternate bearing is a widely spread phenomenon, occurring in both deciduous and evergreen fruit plants. It is a problem in most polycarpic fruit crops.

Alternate Bearing in Fruit Trees - Biotech Articles

In perennial fruit crops, reproductive success and productivity are principally governed by the core event, regular flowering. However, this feature bearing can be influenced by different factors viz. environmental conditions, germplasm, rootstocks, and cultural operations. The phenomenon of irregular bearing is more dominant in perennial fruit crops.

Physiological and molecular basis of alternate bearing in ...

ALTERNATE BEARING 131 grapefruit in Florida, 'Washington Navel' orange in California, and 'Redblush' grapefruit in Texas. In 'Marsh' grapefruit in Florida 660 of the variance was imputable to peaks at 2 and 2.5 years; very little cyclical bearing was found for 'Navel' orange in California; and 430 of

Alternate Bearing in Fruit Trees

Besides apple, biennial or alternate bearing is also commonly found in other fruit trees such as pistachio, pecan, olive, citrus, avocado or mango 6. The physiological reason for entering an 'off' ...

Alternate Bearing in Fruit Trees | Request PDF

Leaf bearing trees dominate this climate close to the coastal regions and ferns dominate the northern region as well as some inland parts. The apple, pear, cherry, and plum are the most widely grown and eaten, owing to their adaptability. Many other fruits are important regionally but do not figure prominently in commerce.

Temperate Fruits | Classification of fruits | List of ...

Formula 1: Alternate bearing index (I) = (year 1 yield) - (year 2 yield)/(year 1 yield + year 2 yield), where I = 0 is no alternate bearing and I = 1.0 is complete alternate bearing; and. Formula 2: Alternate bearing = (current year's yield) - (5-year running average yield)/5-year running average yield; when the current yield is 20% greater than the 5-year average yield, it is an on-crop and when the current yield is 20% less than the 5-year average, it is an off-crop.

Apple Crop Load Management - Alternate Bearing

and evergreen trees. Alternate bearing occurs in all climatic regions, temperate, subtropical and tropical, regardless of the optimal growing conditions for a particular species. Young trees with high vegetative vigour normally exhibit less alternate bearing than fully developed trees. Alternate bearing is a major problem in citrus production

New technology addresses alternate bearing in citrus

Thin biennially bearing apple trees in their fruiting year, between 30 and 60 days after they're in full bloom. Use secateurs to remove the smallest fruit, leaving a fruit-to-leaf ratio between one...

How to Stop Biennial Bearing in Apples | Home Guides | SF Gate

Temperate fruits are those adapted to the temperate zone climates in the middle latitudes. Some examples of these include apple, pear, peach, plum, grape, and strawberry. These fruits are also classified in other forms: apple and pear appear as pome fruits, peach and plum as stone fruits, and grape and strawberry as small fruits.

Temperate Fruits - an overview | ScienceDirect Topics

It is well documented that flower and fruit set have a major impact on fruit quality and regularity of bearing of apple trees (*Malus domestica* Borkh.) and that flower and fruit thinning help to avoid alternate bearing and improve fruit quality. Efficient, chemical-free flower and fruit thinning methods would help to further reduce chemical inputs in integrated fruit production and to reduce production costs and alternate bearing in biological (organic) apple orchards.

alternate bearing, biennial bearing, fruit colouration, fruit firmness, fruit quality : DOI: 10.17660/ActaHortic.2013.998.8:
Abstract: This contribution presents an innovative approach for thinning fruit crops trained to any kind of spindle trees, irrespective of species, cultivar, temperature and tree age.

CONCEPTS OF SELECTIVE MECHANICAL THINNING IN FRUIT TREE CROPS

Average bearing age of fruit trees • Crop Time in years •
Apple 4–6 • Apricot 3–5 • Cherry, sour 3–5 • Cherry, sweet 5–8 • Peach 3–4 • Pear 4–6 • Plum 3–5
4. Flower Bud Formation and Survival • Fruit trees often fail to bear due to either the inability to form flower buds or the failure of the flower buds to develop completely.

Bearing fruits - SlideShare

Video: Illinois Ever-Bearing Mulberry. Mulberry trees, of which there are many varieties, are a popular permaculture choice because the yield tends to be incredibly large, and the trees are well suited from USDA Zone 5 to 9. Some varieties will start providing fruit within the first couple of years. The white mulberry can be over 20 meters high, a canopy tree, and the lifespans of some ...

20 Quick-Producing Perennial Fruit Trees, Vines, Bushes ...

The Mediterranean basin has long been a site of temperate fruit and nut production. Grapes, olives, figs, almonds, dates, and carobs have been cultivated there since early times. This area has both active consumption and commerce in these crops.
