Poor app performance can ruin the user experience and destroy your app's reputation. If it ever responds slowly, shows choppy animations, freezes, crashes, or consumes a lot of power, your users will notice. To avoid these performance problems, use the Android Profiler to measure your app's memory, CPU, and network usage.

Quick start: Run a sample Android app with the Google Pay API

Why write requirements? Well, let's imagine you want to produce a mobile app, but you don't have the programming skills. So, you find a developer who can build the app for you, and you describe the idea to him. Surprisingly, when he showcases the app for the first time, you see that it is not exactly what you want. Why? Because you didn't provide enough detail when describing the idea.
