The time domain approach focuses on modeling some future value of a time series as a parametric function of the current and past values. In this scenario, we begin with linear regressions of the present value of a time series on its own past values and on the past values of other series.~~

1 Models for time series 1.1 Time series data A time series is a set of statistics, usually collected at regular intervals. Time series data occur naturally in many application areas. • economics - e.g., monthly data for unemployment, hospital admissions, etc. • finance - e.g., daily exchange rate, a share price, etc.~~

The time series package included in the back of the book is a slightly modified version of the package ITSM, published separately as ITSM for Windows, by Springer-Verlag, 1994. It does not handle such large data sets as ITSM for Windows, but like the latter, runs on IBM-PC compatible computers under either DOS or Windows (version 3.1 or later).~~

~~Introduction to Time Series and Forecasting | Peter J ...
Time series theory is a mixture of probabilistic and statistical concepts. The probabilistic part is to study and characterize probability distributions of sets of variables X_t that will typically be dependent. The statistical problem is to determine the probability distribution of the time series given observations X_1, \dots, X_n at times 1, 2, ...~~
