This code is caused by the engine speed timing sensor. It is located on the front cover of the engine on the drivers side. It has 3 wires connected to it. This code can be caused by a faulty sensor or faulty wiring harness. Please reply back if you need more help or have more questions. I am happy to assist.

A secondary speed/timing sensor allows the engine to continue to operate if there is a failure of the primary speed/timing sensor. If both speed/timing sensors would fail, the ECM would discontinue power to the unit injectors. The ECM provides the engine speed/timing sensor with 12.5 ± 1.0 VDC.

The secondary engine speed sensor is located on the drivers side of the engine. It is on the back of the front cover in front of the air compressor. It has two wires. If you have a code for it, the sensor has most likely failed. But its good to inspect the harness that connects to it as well. It could also be damaged.
