Chapter 13 - Genetic Engineering. A very common type of genetic engineering involves inserting DNA from one organism into another. An example is the insertion of a human gene into a circular DNA plasmid from a bacterium. Then that engineered plasmid is taken in by another bacterium and the product of the human gene is generated in large quantities.

Chapter 13 - Genetic Engineering - Judy Jones Biology

Genetic Engineering For many years, scientists knew the structure of DNA and knew that information flowed from DNA to RNA and from RNA to proteins. In the last few decades, scientists have learned more about how individual genes work by using genetic engineering. Genetic engineering is a way of manipulating the DNA of an organism by inserting ...
