Chemical kinetics is the study of chemical reaction rates and reaction mechanisms. The study of chemical reaction engineering (CRE) combines the of chemical kinetics study with the reactors in which the reactions occur. Chemical kinetics and reactor design are at the heart of producing almost all industrial chemicals.

reaction engineering (CRE): Chemical reaction engineering is that engineering activity concerned with the exploitation of chemical reactions on a commercial scale. Its goal is the successful design and operation of chemical reactors, and probably more than any other activity, it sets chemical engineering apart as a distinct branch of the ...

Reactor Design Lectures Notes

Another important field of chemical engineering is that of chemical reaction engineering: considering the reactions that produce desired products and designing the necessary reactors accordingly. The design of reactors is impacted by many of the aspects you have encountered in the previous lectures, such as the equilibrium and the reaction rate ...
