In survival analysis, competing risks refers to events that impede the failure event of interest—death from unrelated causes during a study involving the recurrence of breast cancer, for example. Competing risks analysis is becoming an increasingly popular topic in medical research because practitioners have discovered that the standard assumptions made when treating competing events as censored are often violated in practice.

precludes the occurrence of the primary event of interest. In the first example, the researcher is interested in some event, but death may occur first in many patients, preventing the event of interest from happening to these patients.

Competing Risks Survival Analysis

In the medical world competing risks problems are common. Many times people avoid using competing risks methodology because they are not well understood and not well implemented in software. I have found this book to be a very good introduction to competing risks survival analysis.
