INITIAL OCCUPATIONAL THERAPY EVALUATION REPORT

Abstract. This paper presents the Comprehensive Occupational Therapy Evaluation Scale (COTE Scale) for use by occupational therapists in short-term, acute-care psychiatric facilities. The scale defines 25 behaviors that occur in and are particularly relevant to the practice of occupational therapy. The scale is used as an initial evaluation, as a record of patient progress, and as a means of communicating the evaluation, progress, and treatment to other hospital departments.

Comprehensive occupational therapy evaluation scale

Basic employment skills are evaluated through occupational therapy with assessments of upper extremity strength, cognitive and visual skills, dexterity and activities of daily living.. Based on your needs your comprehensive evaluation may include residential services in a facility with accessible rooms, a dining hall and scheduled recreational activities to create a comfortable atmosphere.

Comprehensive Evaluation

Robert is a 4-year-old male who has been referred for an occupational therapy evaluation. Robert's mother reported that there were no complications with his birth, and that he has a diagnosis of Sensory Processing Difficulty 782.0 and Pervasive Developmental Disorder 299.9. His current medications may be found in his chart. Subjective:
