Thoracic trauma may present as an isolated rib fracture, a chest contusion, or a laceration; however, significant thoracic trauma often involves multiple organ systems and several anatomic regions. The chest trauma that results from a motor vehicle accident may result in injury to the sternum, the ribs, and the heart, aorta, and lungs.

Adrenal masses are often discovered incidentally and are then termed adrenal incidentalomas (AIs). They are often discovered after an imaging procedure is performed that is unrelated to the adrenal gland.

A CT scan or computed tomography scan (formerly computerized axial tomography scan or CAT scan) makes use of computer-processed combinations of many X-ray measurements taken from different angles to produce cross-sectional (tomographic) images (virtual "slices") of specific areas of a scanned object, allowing the user to see inside the object without cutting.

[Home Page: Urology](#)

ABSTRACT A careful physical examination is a valuable and noninvasive means of assessing pleural effusion and should be routinely performed in every patient in whom this condition is suspected. Although physical examination is less accurate than ultrasonography or computed tomography in detecting a pleural effusion, the sensitivity and specificity of the different physical signs of pleural ...

Hemoptysis is the spitting of blood that originated in the lungs or bronchial tubes. The patient's history should help determine the amount of blood and differentiate between hemoptysis ...

CT scan - Wikipedia

Computed tomography (CT) scanning, also known as, especially in the older literature and textbooks, computerized axial tomography (CAT) scanning, is a diagnostic imaging procedure that uses x-rays to build cross-sectional images ("slices") of the body. Cross-sections are reconstructed from measurements of attenuation coefficients of x-ray beams in the volume of the object studied.

Level C Recommendations. Perform lumbar puncture or computed tomography angiography to safely rule out subarachnoid hemorrhage in the adult emergency department patient who is still considered to be at risk for subarachnoid hemorrhage after a negative noncontrast head computed tomography result.

Accuracy of the physical examination in evaluating pleural ...

Some lung cancers can be found by screening, but most lung cancers are found because they are causing problems. The actual diagnosis of lung cancer is made by looking at a sample of lung cells in the lab. If you have possible signs or symptoms of lung cancer, see your doctor. Your doctor will ask ...

Computed Tomography Physical Principles Clinical

Computed tomography (CT) scanning of the head uses a series of x-rays of the head taken from many different directions; the resulting data is transformed into a series of cross sections of the brain using a computer program. CT images of the head are used to investigate and diagnose brain injuries and other neurological conditions, as well as other conditions involving the skull or sinuses ...

Evaluation and Management of Children and Adolescents With ...

Primary adrenal insufficiency, or Addison disease, has many causes, the most common of which is autoimmune adrenalitis. Autoimmune adrenalitis results from destruction of the adrenal cortex, which ...

Adrenal Incidentaloma Workup: Approach Considerations ...

x Pre-clinical data suggest that triple-negative breast cancer may recur in irradiated tissue due to stromal-based attraction of circulating tumor cells into a pro-inflammatory, lymphocyte-depleted microenvironment. We hypothesized that patients with triple-negative breast cancer are at risk for recurrence based on the inflammatory response to radiation.

Addison Disease: Early Detection and Treatment Principles ...

In a review on SNRB for patients with LBP and radiculopathy, Gajraj (2004) stated that SNRB, when combined with a careful history, physical examination, and quality radiographical studies, is an important tool in the diagnostic evaluation of patients with predominantly radicular symptoms.

Principles and Practice of PET/CT

Introduction. Mental health problems are among the leading contributors to the global burden of disease. 1 Unfortunately, pediatric populations are not spared of mental health problems. In the United States, 21% to 23% of children and adolescents have a diagnosable mental health or substance use disorder. 2, 3 Among patients of emergency departments (EDs), 70% screen positive for at least 1 ...
