JØRGENSEN Abstract. We show that if a class of modules is
closed under pure quotients, then it is precovering if and only if
it is covering, and this happens if and only if it is closed under
direct sums. This is inspired by a dual result by Rada and
Saorín.

NDC Worship - KuasaMu Terlebih Besar

Abstract. A left R -module M is said to be f p -injective if, for every monomorphism $K \rightarrow L$ with K and L finitely presented left R -modules, $\text{Hom}(L, M) \rightarrow \text{Hom}(K, M)$ is an epimorphism. A right R -module N is called f p -flat if, for every monomorphism $K \rightarrow L$ with K and L finitely presented left R -modules, $(\{N \otimes K \rightarrow N \otimes L\})$ is a monomorphism. In this note, we study precovers and ...

COVERS AND PURITY 3 Purity. Consider a short exact sequence $0 \rightarrow M_0 \rightarrow M \rightarrow M_0/M \rightarrow 0$ where M_0 is a submodule of M and M_0/M is the corresponding quotient module. The sequence is called pure exact if it stays exact when ten-sored with any module, and then M_0 is called a pure submodule and M_0/M is called a pure quotient module of M . Recall the clever result [15, cor. 3.5(c)] by Rada and Saor ...

We prove that all quasi-cotilting modules are pure-injective and cofinendo. It follows that the class Cogen M is always a covering class whenever M is a quasi-cotilting module. Some characterizations of quasi-cotilting modules are given.
