There are two styles of Electronic Speed Controller, Brushed and Brushless. Both work on the same principle. An ESC is made up of three key components. A BEC/voltage regulator, a Processor and the switching consisting of FETs (field effect transistor).

A Guide to Electronic Speed Controllers - Modelflight

The term ESC stands for " electronic speed control is an electronic circuit used to change the speed of an electric motor, its route and also to perform as a dynamic brake. These are frequently used on radio-controlled models which are electrically powered, with the change most frequently used for brushless motors providing an electronically produced 3-phase electric power low voltage source of energy for the motor.

Electronic Speed Controllers - Sussex Model Centre -SMC

Electronic Speed Controllers Notes on Selecting an ESC As with all things, it's best not to run ESC's right on their limit especially if there is limited cooling. As a rule of thumb if you your motor is expected to draw 25A then chose an ESC with 25% extra capacity i.e. 31.25A, the next one up is 40A so select a 40A ESC.
