Gravity and magnetic geophysical methods are passive. They rely on no controlled sources but seek out naturally occurring variations in the earth ' s gravity and magnetic fields. For this reason, some military uses of these surveys have long included quiet detection of submarines and volatile unexploded munitions.

Geophysical Surveying Using Magnetism Methods Introduction

Gravity methods The gravity field of the Earth can be measured by timing the free fall of an object in a vacuum, by measuring the period of a pendulum, or in various other ways. Today almost all gravity surveying is done with gravimeters.
