Pro installation vs. self-installation. When you're signing up for your AT&T Internet service, you'll be given a choice: you can either have a professional set up your service for you, or you can order a self-install kit and handle things yourself. There are pros and cons to each method, so let's take a look.

[High Speed Data Installation - HSDI | NCTI](#)

A high-speed data installation requires a specific downstream signal level to work properly. What should be the level of the high-speed data downstream carrier? Between -15 dBmV and +15 dBmV. What is a generally accepted range for a cable modem output level? 40-50 dBmV.

[2-Channel High Speed Data Module Installation and ...](#)

In the future, advances in fiber- and copper-media technology will enable all datacenter links to be capable of achieving error-free 10-Gbit/sec data rates. High-speed applications, such as core-to-core switching, HPC clusters, and server/SAN virtualization will continue to drive data rates to 40 and even 100 Gbits/sec.
