~~How Animals Use Sound to Communicate—HHMI BioInteractive~~

Many animals communicate by smell: they release pheromones (airborne chemicals) to send messages to others. Pheromones play an important part in reproduction and other social behavior. They are used by many animals, including insects, wolves, deer, and even humans! Bees dance when they have found nectar.

~~How Do Animals Communicate By~~

Animals might not be able to speak or master advanced language techniques, but they certainly have other ways of communicating. Whale song, wolf howls , frog croaks, bird chips -- even the waggle dance of the honeybee or the vigorous waving of a dog's tail -- are among the panoply of ways animals transmit information to each other and to other denizens of the animal kingdom.

~~How Do Animals Communicate? | Sciencing~~

Chemical communication between animals. Chemical communication between animals is one of the most important and poorly understood methods of communicating in the animal kingdom. One of the most curious examples can be found within social insects. For example, bees communicate with each other via pheromones. By using these chemical signals, they can alert other members of the hive about the presence of danger or where to extract nectar.

~~Animal communication | Britannica~~

As it turns out, these critters communicate through a kind of head-banging. Spending their lives underground, they can communicate with one another by thumping their heads against the tops of their tunnels, in that way sending vibrations through the earth that travel much farther attempting to make a loud noise would be able to. The pace and intensity of the thumps indicate different meanings.

~~25 Amazing Ways Animals Communicate That You Never Knew ...~~

Communicating is something that all animals, including humans, do. Whether it's a dog barking a warning, a cat arching its back, or crickets chirping, animals are constantly sending messages to each other. Scientists studying communication among animals are trying to understand the neurobiology of sound production and perception.
