Palm Oil & Others: Iodine Value (IV)

Iodine value is a measure of the degree of unsaturation of an oil. It is defined as the number of parts by mass of iodine absorbed by 100 parts by mass of an oil or fat. REAGENTS: Hanus solution(iodine monobromide), freshly prepared starch

are as follows (g of iodine/100g of oil):
Palm 50-55, corn 103-135, soybean
120-143, sunflower 110-143 and peanut
84-105 [12] .

IODINE VALUE (I.V.) | palm oil - QCL
Iodine value can be used to measure the
degree of unsaturation of oils and fats.
The results are normally expressed as

Acces PDF Iodine Value I V Palm Oil

the number of grams of iodine absorbed by 100 g of oil or fat, considering the conditions of the test. This parameter is extremely important in the palm oil industry, where it is used to follow the fractionation process.

OF OILS AND FATS Results ...

PalmOil Tester: analyzer for crude and refined palm oil. PalmOil Tester is a simple and accurate testing system that, within a few minutes, enables to determine Free Fatty Acid (FFA), Peroxide Value (PV), DOBI, Iodine Value, Anisidine Value (AnV) & Carotene in raw and refined palm oil.

Iodine Value I V Palm

Acces PDF Iodine Value I V Palm Oil

IODINE VALUE (I.V.) | palm oil
DEFINITION AND SCOPE The most important application of the iodine value is to determine the amount of unsaturation contained in fatty acids. This unsaturation is in the form of double bonds which react with iodine compounds. The higher the iodine value, the more unsaturated fatty acid bonds

Palm Oil Tester | Quartz Analytics
Iodine value (IV) is used as a parameter in process control as well as a quality parameter in traded palm oil products. IV measures the number of double bonds in the molecular structure of an oil. To form a double bond, carbon requires more energy (615 kJ/mol) than to form a single bond (350 kJ/mol).
