ISO 14801:2016(E) Foreword ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical

~~DIN EN ISO 14801 Techstreet~~

ISO 14801 aims to establish a benchmark for in vitro testing of implants to compare different implant designs and geometries. It does not begin to replicate the complex conditions implants are subjected to when implanted within the oral cavity.

International standard ISO/IEC 11801 Information technology — Generic cabling for customer premises specifies general-purpose telecommunication cabling systems (structured cabling) that are suitable for a wide range of applications (analog and ISDN telephony, various data communication standards, building control systems, factory automation). It covers both balanced copper cabling and optical fibre cabling.
