Here and in the next two posts we are looking into Keyword Driven Framework at operational level (lower level). In this post we have Keyword Driven Framework where both data and keywords are in one file, next we will look into Keyword Driven Framework where data and keywords are in ...

[Keyword Driven Framework using QTP - How to develop a Keyword Driven Framework in QTP](#)

A keyword symbolizes a function and is defined as a set of actions that must be executed on a test object. A keyword-driven test consists of high and low-level keywords, including the keyword arguments, which is composed to describe the action of a test case. 2. Advantages and disadvantages of Keyword-driven testing Advantage:

LearnQTP is the oldest and most popular site on QTP , running strong since 2006. Ankur Jain is the founder at Ajonit Software LLP and the chief editor at LearnQTP. All articles and tutorials on this site are contributed by the expert team under the guidance of Ankur. Every team member is certified on QTP/UFT usage.

[6 Popular Test Automation Frameworks for UFT \(QTP\)](#)

Keyword Driven Framework is a type of Functional Automation Testing Framework which is also known as Table-Driven testing or Action Word based testing. The basic working of the Keyword Driven Framework is to divide the Test Case into four different parts.

[HP UFT/QTP - Using Keyword View](#)

Data-Driven Automation Framework Using QTP Creating multiple Google user accounts is the task we will try to accomplish using this framework. In the example earlier, we hardcoded the first name, last name, user id details, etc. into our code while trying to create an account.

[Data, Keyword & Hybrid Automation Frameworks in QTP/UFT](#)

Keyword-Driven Framework Keyword driven testing is a type of functional automation testing framework which is also known as table-driven testing or action word based testing. In Keyword-driven testing, we use a table format, usually a spreadsheet, to define keywords or action words for each function that we would like to execute.

[KeyWord Driven Framework in QTP](#)

Data-driven testing is a framework where test input and output values are read from data files (datapools, ODBC sources, csv files, Excel files, DAO objects, ADO objects, and such) and are loaded into variables in captured or manually coded scripts. In this framework, variables are used for both input values and output verification values.

[Keyword Driven Framework - Introduction](#)

Keyword Driven Framework is a type of QTP Framework where for a particular test case, you would first identify a set of Keywords and then associate an action (or function) which each of these keywords. Let us understand this concept with the help of an example.

[Difference between Keyword-driven testing & Data-driven ...](#)

The Concept of Keyword Driven Framework In Key Work Driven Framework the script values will be written in Excel files and QTP will execute them using Driver Script. Now this will explain how to execute the script which is specified in Excel Files.

[Keyword Driven Framework In Uft](#)

What is Keyword Driven Framework? A keyword-driven framework is a table-driven testing or action word based testing. It is a software testing method suitable for both manual and automated testing. What is Keyword Driven Testing? A keyword-driven testing is a scripting technique that uses data files to contain the keywords related to the application being tested.

[Keyword Driven Testing Framework with Example](#)

Data, Keyword & Hybrid Automation Frameworks in QTP/UFT Data Driven Framework. Step1) Prepare the Test Case for the Application under Test. Step 2) Add the Objects from AUT to OR. Step 3) Write the scripts based on the Test Case. Keyword Driven Framework.

### Basics of OTP Keyword Driven Framework - XX

Types of Automation Frameworks: (applies for QTP Framework) Keyword driven - Create different keywords for a different set of operations and in the main script we can just refer to these keywords. Data driven - To run the same set of operations on multiple sets of data that are kept in separate files, mostly excel sheets. Hybrid - A...

### Data Driven and Hybrid Frameworks Explained with OTP Examples

In this keyword driven framework, Keywords are associated with functions. Keywords can also be associated with operations on objects like click etc. In UFT Test (above) we are using built-in Environment variable "TestName", in order to get the name of the current test and pass this to func\_Read\_Keywords (Function 1 of Function Library2).

### UFT Keyword Driven Framework at Operation Level - Part 2 - XX

Keyword Driven Framework In the Keyword Driven Automation Framework, we can create multiple keywords that allow testers to associate a unique action or function for each of these keywords. It helps software testers to create an Action or Function Library that holds the logic to read keywords and call the associated action.

### OTP - Frameworks - Tutorialspoint

In the previous article on Keyword Driven Framework mapped at Operation Level, we covered the basic features of the UFT keyword driven framework that we would be creating here. The article contained information about the components that can be used in this framework as well as the general flow of the test cases.
