Task Notes. Prep the equipment by testing the King's cuff and the inflation valve and then lubricate the tip (avoid lube in the ventilation holes). Prep yourself by performing a rapid mental review of the steps and troubleshooting. (This can happen during prep of the equipment— this is a rapid review) Suggested points to review: "Insert to the teeth, inflate to 60cc, ventilate, if hard to ventilate then withdraw slightly, if easy to ventilate but ...

3 things EMS providers need to know about supraglottic airways

Airway Maneuvers. Head tilt/chin lift. The head tilt/chin lift is the basic maneuver for establishing an airway in someone without a cervical spine injury. By tilting the head back, the rescuer straightens the patient's airway from the lungs, through the pharynx, with only a slight curve at the mouth. The chin lift pulls

A Review of Airways - ACLS Medical Training

In this analysis of OOHCA airway management, first attempt BLS King LT-D placement success exceeded that of first attempt paramedic ETI success. In addition, patients in the King LT-D group were more likely to have had an advanced airway attempted and to have had a successful advanced airway placed when multiple attempts were required.

King LT-D use by urban basic life support first responders ...

Limitations to this pilot do not allow for specific comment on or validation of the efficacy of the King LT® as a first or second line airway tool. No digital end-tidal CO₂ monitoring was available; nearly all of the patients were critically ill or near dead and no patient follow-up was available for the few who survived to the ED.
