SNMP: A Guide To Network Management PDF
The SNMP — the Simple Network Management Protocol — is the standard for open, interoperable network management — defining 2000 items of management information. Written by the authors of the SNMP, this exceptionally practical reference goes beyond the standards by explaining which of those 2000 items are important and how to make use of them in order to improve the efficiency of real networks.

The manager is software that receives the traps and that provides a mechanism to SET or GET SNMP objects from the network device. To receive autonomous traps, the manager runs an application that listens on the TCP/IP SNMP trap port (port 162). SNMP SETs and GETs use port 161. This application is typically called a Trapd, or trap daemon.
