mathematics. No one can learn topology merely by poring over the definitions, theorems, and examples that are worked out in the text. One must work part of it out for oneself. To provide that opportunity is the purpose of the exercises.

Section 26: Compact Spaces A compact space is a space such that every open covering of contains a finite covering of .; If a space is compact in a finer topology then it is compact in a coarser one. If a space is compact in a finer topology and Hausdorff in a coarser one then the topologies are the same.

2 Ex. 13.7 (Morten Poulsen). We know that \mathcal{T}_1 and \mathcal{T}_2 are bases for topologies on \mathbb{R} . Further-more \mathcal{T}_3 is a topology on \mathbb{R} . It is straightforward to check that the last two sets are bases for topologies on \mathbb{R} as well.

A topology can be defined in terms of closed sets as a collection of closed sets containing the empty set and the whole space, as well as the intersection of any subcollection of sets and the union of any finite subcollection of sets.

Munkres - Topology - Chapter 2

Solutions Section 13 Problem 13.1. Let X be a topological space; let A be a subset of X . Suppose that for each $x \in A$ there is an open set U containing x such that $U \cap A = \{x\}$. Show that A is open in X . Solution: Let \mathcal{C} be the collection of open sets U where $x \in U \cap A$ for some $x \in A$. Suppose U

manual is solutions.tex. Some solutions have figures, which are done directly in LaTeX using the TikZ and PGFPLOTS packages. The python directory contains some quick and dirty Python scripts that were used to gain insight while working on some of the exercises. These are not documented at all and so probably will not be of interest to anyone else.
