[Signature curves define Zaha Hadid-designed arts center](#)

Atlas, plural Atlantes, in architecture, male figure used as a column to support an entablature, balcony, or other projection, originating in the Classical architecture of antiquity. Such figures are posed as if supporting great weights (e.g., Atlas bearing the world). The related telamon of Roman architecture,...

[Atlas | architecture | Britannica](#)

Atlas (architecture) The body of many Atalantes turns into a rectangular pillar or other architectural feature around the waist level, a feature borrowed from the term. The pose and expression of Alalantes very often show their effort to bear the heavy load of the building, which is rarely the case with terms and caryatids.
