Metabolic Functions of the Liver.
Hepatocytes are metabolic overachievers in the body. They play critical roles in synthesizing molecules that are utilized elsewhere to support homeostasis, in converting molecules of one type to another, and in regulating energy balances.

Concise, up-to-date, faculty-reviewed articles on the pathophysiology of disease | Welcome to MPR.

Radiculopathies

Understanding the pathophysiology of a burn injury is important for effective management. In addition, different causes lead to different injury patterns, which require different management. It is therefore important to understand how a burn was caused and what kind of physiological response it will induce. Burn injuries result in both local and systemic responses.

Pathophysiology

Pathophysiology definition is - the physiology of abnormal states; specifically : the functional changes that accompany a particular syndrome or disease.

Sepsis, severe sepsis, and septic shock represent increasingly severe systemic inflammatory responses to infection. Sepsis is common in the aging population, and it disproportionately affects patients with cancer and underlying immunosuppression. In its most severe form, sepsis causes multiple organ dysfunction that can produce a state of chronic critical illness characterized by severe immune ...
