Unfortunately, reimbursement constraints and limited psychiatric training in most primary care curricula often discourage full exploration and thorough work-up of mental illness . Due to the stigma of psychiatric conditions, patients are often reluctant to present to mental health settings and may not seek treatment . However, most nonemergent psychiatric conditions can be treated successfully in primary care settings.

The Primary Care Psychiatric Interview | Neupsy Key

In most countries, primary care is the first point of contact for many individuals with mental health or substance use addiction problems. It is the place where the majority of mental health problems are treated and where physical and emotional care can be integrated within a less stigmatising environment (WHO, Wonca 2008; Kates et al. 2011).
