Quantum mechanics - Quantum mechanics - Applications of quantum mechanics: As has been noted, quantum mechanics has been enormously successful in explaining microscopic phenomena in all branches of physics. The three phenomena described in this section are examples that demonstrate the quintessence of the theory. The kaon (also called the K0 meson), discovered in 1947, is produced in high ...

reason for studying quantum features of transport and optical phenomena has emerged in the past decades, in connection with extensive investigation of kinetic phenomena under strong external fields and in nanostructures.

~~Kinetic Theory—Classical, Quantum, and Relativistic ...~~

The quantum theory of measurements and quantum information processing actively developing in the last decade are based on the quantum kinetic theory. Because a deductive theoretical exposition of the subject is not convenient, the authors restrict themselves to a lecture-style presentation.

~~Quantum Kinetic Theory and Applications~~

In the first part (chapters 2-8) we consider quantum kinetic equations for electrons and bosons and different variants of diagram techniques. The second part is mostly devoted to various modern applications of the quantum kinetic theory. The last chapter describes the theory of fluctuations.

In this chapter we shall discuss some further applications of kinetic theory. In the previous chapter we emphasized one particular aspect of kinetic theory, namely, that the average kinetic energy in any degree of freedom of a molecule or other object is $\frac{1}{2}kT$.

Kinetic Theory: Classical, Quantum, and Relativistic Descriptions goes beyond the scope of other works in the field with its thorough treatment of applications in a wide variety of disciplines. Its clear exposition and emphasis on concrete examples will make it not only an excellent graduate text but also a valuable resource for researchers in such disciplines as aerospace, mechanical, and ...

Quantum tunnelling is among the central non trivial quantum effects in quantum biology. Here it is important both as electron tunnelling and proton tunnelling. Electron tunnelling is a key factor in many biochemical redox reactions (photosynthesis, cellular respiration) as well as enzymatic catalysis while proton tunnelling is a key factor in spontaneous mutation of DNA.
