Altera FPGA Board: Onchip FIFO Memory Core - Community Forums

The first stage boot loader loads the clocking information, and then the bitstream onto the FPGA prior to the Kernel being loaded onto the FPGA. Though the FSBL doesn't need to be changed very often, if there is anything that you originally program in one clock domain and change clock domains in a later build, then failing to update the FSBL could lead to unexpected behavior and will possibly ...

Conversely, the Altera has extremely thoughtful and comprehensive presets that have a continuity that can best be described as immersive. All of the presets are different and really have a patience and a point to them. The Altera feels like they obviously spent a LOT of time programing an engaging and varied experience in each preset.

\\$\begingroup\\$ This is something new for me as I assumed that modern microcontrollers (at least for last 10-15 years) has everything on a board: memory, IOs, timers and so on. So I assumed that Altera's FPGAs are the same. Please see my EDIT 1 for some clarification regarding your counter-questions.
