manual, is intended to provide first-time users with hands-on experience using the modeling, analysis and design features of SAP2000. It is strongly recommended that you read this manual and work the tutorial before attempting a real project using SAP2000. Additional information can be found in the on-line Help facility available

### 888.565.9181 • www.TrusSteel.com Truss Design Manual

Analysis of 2D Truss Structure in SAP 2000 Truss is one of the most popular structural forms used by mankind. It is primarily characterized by saving in material, axial forces, pinned joints and versatility of materials that can be used to build a truss.

Truss members are modeled in CSI Software using frame objects which are assigned end releases. A designated truss member is not available to modeling because CSI strives to keep the interface and controls simple and practical, using fewer objects and features which are more versatile. Hence frame objects are suitable to represent truss members.

The SAP name has been synonymous with state-of-the-art analytical methods since its introduction over 30 years ago. SAP2000 follows in the same tradition featuring a very sophisticated, intuitive and versatile user interface powered by an unmatched analysis engine and design tools for engineers working on transportation, industrial, public works, sports, and other facilities.

The results of the truss analysis presented in the output file are listed by frame element number. Note that SAP2000 list the variation of the internal forces and moments along the element. For truss analysis there are no bending moments and shear forces. The values listed in the "P" column are the axial forces in the truss members.
