Olympic Medal Count Analysis Part 1 Creating a Scatter Plot

Matplotlib is a Python module that lets you plot all kinds of charts. Bar charts is one of the type of charts it can be plot. There are many different variations of bar charts. Related course: Matplotlib Examples and Video Course. Example Bar chart. The method bar() creates a bar chart.

Percent – Jeremy Barr

We can plot multiple bar charts by playing with the thickness and the positions of the bars. The data variable contains three series of four values. The following script will show three bar charts of four bars. The bars will have a thickness of 0.25 units. Each bar chart will be shifted 0.25 units from the previous one.

It is always a good idea to make such scatter plots: visually inspecting the data can lead us to find problems with data coding such as inputting 100 instead of 10 for a single participant. Warning: This plot will be available from JASP version 0.12 onwards. The theoretical mediation model is shown in the image below.

Matplotlib Bar Chart - Python Tutorial

Some common multivariate plots are scatter plots, line-plots, box-plots, or point-plots. We will start by graphing two continuous numerical variables. Scatter plots. Scatter plots are great if you have two variables that are measured on continuous numerical scales (i.e. dollars, kilograms, ounces, etc.).
