PSY 323 Sensation and Perception - RuachWords

Sensation and Perception. Researchers have studied vision more thoroughly than the other senses. Because people need sight to perform most daily activities, the sense of sight has evolved to be highly sophisticated. Vision, however, would not exist without the presence of light. Light is electromagnetic radiation that travels in the form of waves.

Sensation Perception And Action Study

Sensation and perception are two separate processes that are very closely related. Sensation is input about the physical world obtained by our sensory receptors, and perception is the process by which the brain selects, organizes, and interprets these sensations. In other words, senses are the physiological basis of perception.

Sensation and Perception, 2nd Edition | Macmillan Learning ...

Perception in psychology can be defined as the analysis of sensory information within the brain. As we go through our day, we are surrounded by the rich stimuli of modern life and we rely heavily on our sight to inform us of where we are placed within this world.
