Industrial ventilation generally involves the use of supply and exhaust ventilation to control emissions, exposures, and chemical hazards in the workplace. Traditionally, nonindustrial ventilation systems commonly known as heating, ventilating, and air-conditioning (HVAC) systems were built to control temperature, humidity, and odors.

### **VENTILATION TECHNICAL GUIDE,**

First issued in 1951, the ACGIH Industrial Ventilation Manual for Design (IVM) has been the premier reference for the design and operation of industrial ventilation systems. The Companion Study Guide (CSG-IVM) shows how to apply the principles provided in the IVM-D and can ease the study of industrial ventilation. The CSG-IVM was written for students or practicing industrial hygienists and engineers. It simplifies, explains, and makes understandable the complex reference material of the IVM.

The ventilation and perfusion ratio refers to air flowing into the lungs and blood going to the lungs. The two variables should be matched. Insufficient gas exchange is often caused by a mismatch in the perfusion to ventilation ratio. Pulmonary Ventilation Factors. Pulmonary factors that affect
