than 35 years ago, which quickly turned into a “Physics and Psychophysics of Music” course. In addition to regular class work, the students were required to perform a series of acoustical and psychoacoustical experiments in a modest ...

The Physics and Psychophysics of Music: An Introduction ...

Psychophysics quantitatively investigates the relationship between physical stimuli and the sensations and perceptions they produce. Psychophysics has been described as "the scientific study of the relation between stimulus and sensation" or, more completely, as "the analysis of perceptual processes by studying the effect on a subject's experience or behaviour of systematically varying the ...

Plate reverberation has some strange characteristics, due to the unique physics of a plate. This has been described in detail by Jonathan Abel, Kevin Arcas, Stefan Bilbao, and other smart academic folk. A high level summary of some unique plate properties: Dispersion.

[The Physics and Psychophysics of Music | SpringerLink](#)

Psychophysics is basically an interdisciplinary branch of psychology and physics; it studies the relationship between physical stimuli and the sensations along with the perceptions they produce. The psychophysicists analyze the perceptual processes by studying the effect on a behavior; further, they also study the systematically varying properties of a stimulus along one or more physical ...

Psychophysics, study of quantitative relations between psychological events and physical events or, more specifically, between sensations and the stimuli that produce them.. Physical science permits, at least for some of the senses, accurate measurement on a physical scale of the magnitude of a stimulus. By determining the stimulus magnitude that is just sufficient to produce a sensation (or a ...
