

Theoretical Aerodynamics L M Milne Thomson

Theoretical Aerodynamics L M Milne

Milne's book provides an excellent introduction to the study of inviscid airflow using potential theory. The text begins with 2D airfoil analysis via complex transformation techniques (conformal mapping). It then progresses to 3D finite wing theory using lifting line and lifting surface theory.

Theoretical Aerodynamics. A classic in its field, this university text and reference book has long been one of the basic works. This is the complete reprinting of the revised (1966) edition which brings the subject up to date, including a complete and probably unique chapter on conical flow round sweptback wings.

Prof Louis Melville Milne-Thomson CBE FRSE RAS was an English applied mathematician who wrote several classic textbooks on applied mathematics, including The Calculus of Finite Differences, Theoretical Hydrodynamics, and Theoretical Aerodynamics. He is also known for developing several mathematical tables such as Jacobian Elliptic Function Tables. The Milne-Thomson circle theorem and the Milne-Thomson method for finding a holomorphic function are named after him. Milne-Thomson was made a Command
