### *The Equals - Wikipedia*

Returns Boolean. true if the specified object is equal to the current object; otherwise, false.. Examples. The following example shows a Point class that overrides the Equals method to provide value equality, and a Point3D class that is derived from Point. Because Point overrides Object.Equals(Object) to test for value equality, the Object.Equals(Object) method is not called.

### *EQUALS global partnership to bridge the digital gender divide*

If you want to do something specific when a cell equals a certain value, you can use the IF function to test the value, then do something if the result is TRUE, and (optionally) do something else if the result of the test is FALSE.

as someone or something else. I don't understand why I didn't get the promotion when I am certainly equal to Greg in every way. 2. Having the necessary ability, talent, qualities, or capability to handle or accomplish a given role or situation. The young soldier proved equal to the task and ...

### *String.Equals Method (System) | Microsoft Docs*

Perform the following operations: Multiply both sides of the starting point for your proof,  $a^2 = ab$ , by  $\pi$ .  $\pi a^2 = \pi ab$ ; Subtract one (equal) half of your secondary equation,  $3a^2 = 3ab$ , from each side.  $\pi a^2 - 3ab = \pi ab - 3b^2$ ; Add  $3ab$  and subtract  $\pi ab$  on both sides.

### *How Can 0.999... = 1?*

The Equals are a British pop, R&B and rock group formed in North London, England in 1965. They are best remembered for their million-selling chart-topper "Baby, Come Back", though

A mathematical symbol is a figure or a combination of figures that is used to represent a mathematical object, an action on mathematical objects, a relation between mathematical objects, or for structuring the other symbols that occur in a formula. As formulas are entirely constituted with symbols of various types, many symbols are needed for expressing all mathematics.

*How to find all combinations that equal a given sum in Excel?*

There are many different proofs of the fact that "0.9999..." does indeed equal 1. So why does this question keep coming up?

Students don't generally argue with "0.3333..." being equal to  $1/3$ , but then, one-third is a fraction. Maybe it's just that it "feels" "wrong" that something as nice and neat and well-behaved as the number "1" could also be written in such a messy form as "0.9999..."

*How to Write an Equality Method in Java - artima*

Examples. The following example creates a string array that consists of an uppercase "I", a lowercase "i", and a dotless "ı". It then calls the Equals(String, StringComparison) method to compare them by using each possible StringComparison enumeration value.. using System;

```
class Sample { public static void Main() { // Define a string array with the following three "I" characters: // U+0069 ...
```
