have scales, lay eggs on land and have cold blood.

3 Ways to Tell the Difference Between a Tortoise, Terrapin ...

The remarkable adaptations of turtles, tortoises and terrapins have helped them survive for over 200 million years. They are the most wide-ranging of reptiles, found in deserts, forests and the open ocean. But they are also among the world's most endangered animals.

Turtles Tortoises And Terrapins A

Turtles, tortoises and terrapins are closely related reptiles of the order Testudines. These terms are often confused because of regional differences in English, and because the individual species look similar.

The Differences Between Terrapins, Turtles & Tortoises [NEW]

All turtles, tortoises and terrapins are reptiles, and they all fall under the same classification – Testudines. All three are ectothermic, meaning their body temperature is based on the temperature of the air or water surrounding them. They all lay eggs, they all breathe air and they all have scales and shells.
