Algebra Unit 2 - WCS

$-6 < 6 - 2x < 12$. Now subtract 6 from each part: $-12 < -2x < 6$. Now divide each part by 2 (a positive number, so again the inequalities don't change): $-6 < -x < 3$. Now multiply each part by -1 . Because we are multiplying by a negative number, the inequalities change direction. $6 > x > -3$. And that is the solution!
