You can make EFS more secure on Windows XP and Server 2003 systems by configuring EFS to use the 3DES encryption algorithm instead of DESX, the default. You can enable 3DES using Group Policy; this will cause both EFS and IPsec to use 3DES.

Implementing EFS in a Windows Server 2003 Domain

Encrypting File System (EFS) is a useful tool for protecting sensitive data. It uses both public key and symmetric cryptography to protect files on a Windows 2000, Windows XP, or Windows Server 2003 system. EFS is especially useful when computers, such as laptops or computers in physically unsecure locations, are subject to physical compromise.
